Attention : Ms. Charlema R. Grant
Petitions Attorney
Office of Petitions

Dear Ms. Grant,

Regarding our recent telephone conversation I am submitting to you the information you requested regarding patent application # 10/720,043.

As I mentioned to you on the phone, being an independent inventor, I have the following system in place for handling correspondence between USPTO and myself regarding my patent applications:

I place all applications in their own folder, that has a binder clip for each section of the following:

The application forms

The copy of the Postal receipt

A copy of the returned postcard that outlines what I sent in

A Copy of the application check

A copy of the Application itself.

then in the same folder I place all the correspondence from USPTO.

As per our conversation I have no "notice to file corrected application papers" regarding application 10/720,043 and have looked in the four other folders for previous applications and have not found it. Also as per our conversation, I have made the changes to the claims section of my application wherein the claims section started on a page 38 with another part of the specification. Now I have provided what you have requested and begun and ended the claims in their own section starting on page 39 and ending on page 41 and have provided you those as well. Please call me as to any questions you may have at 727-776-7424 at your earliest convenience and thank you for all your help on the phone the other day.

Respectfully,

Richard S. Trela Pro se inventor

readiness, while out and about, and in emergency situations wherein the area is left without recharging power or conventional phone lines.

Upon review of this invention by law enforcement agencies it has been found to be a very much needed and wanted system that answers many problems the world faces today.

Comments such as “theses should be in all federal courthouses”, at the Super Bowl, at all the national monuments, etc”. Essentially wherever there are large groups of people in high risk locations across the nation.
